## **Revised Policy on County Drainlaying Permits Associated with MSD Main Sewer Replacement Projects**

This Policy replaces the policy entitled "Policy on County Drainlaying Permits Associated with MSD Main Sewer Replacement Projects" Issued on April 21, 2006

**Type Project:** MSD Main Sewer Line Replacement Project.

**MSD Responsibilities:** MSD and MSD Inspectors oversee the replacement of the MSD Main, as well as the re-connection (and associated work within 5 feet of the main) of the existing sewer laterals to the new main.

**County Responsibilities:** County requires sewer lateral permits and inspections on any sewer lateral repair/replacement work required beyond 5 feet of the main itself where it is discovered during the replacement of the main that such additional sewer lateral repair/replacement work is required.

**Permit Fees for Unincorporated Areas and Contracting Municipalities:** Permit fees for these County sewer lateral permits will not be waived for any projects. It is in the County's best interest to seek reimbursement for permit processing and inspections of these sewer laterals.

**Permit Application Procedure:** Normal permit application procedures will apply.
